| Component  | Description          | Qty | Component  | Description              | Qty |
|--|----------------------|-----|--|--------------------------|-----|
|    | Wall Plate (A)       | 1   |   | Mounting Bracket (B)     | 2   |
|    | Rawl Plug (C)        | 14  |   | Screw 5/16" * L2-1/2 (D) | 14  |
|    | Assorted Spacers (E) | 18  |   | Angled Spacers (F)       | 8   |
|   | Assorted Screws (G)  | 46  |  | Assorted Washers (H)     | 28  |
|  | Screw M6 * 28 (I)    | 2   |  |                          |     |

MODEL: TWM - 3  
Wall Support for PLASMA Screens

### Step 1

For Brick Walls use the following method for affixing wall plate. Drill 6 holes into the wall by using Wall Plate (A) as a template. Insert Rawl Plugs (C) into the holes, then use 5/16" \* L2-1/2 Screws (D) to secure the Wall Plate (A) to the wall.

For Stud Walls, screw straight into wall with Screw 5/16" \* L2-1/2 (D) making sure at least one line of fixings is attached securely to a wooden baton.

### Step 2

Take both Mounting Brackets (B) and affix them to the rear of the screen using the Spacers/Angled Spacers (E, F), where the screen mounting points are recessed or on a curved surface. Make sure that the Mounting Brackets (B) are contacting either the flat surface of the spacer or the flat surface of the screen back at all times.

### Step 3

Make sure the screen is supported at all times as you lift the screen up and hook the affixed Mounting Brackets (B) over the Wall Plates (A) top flange. Once in the correct position take M6 \* 28 Screw (I) and secure screen to Wall Plate (A) by screwing it upwards into the location hole on the underside of the Mounting Bracket (B). Tighten until screw reaches underside face of Wall Plate (A) and screen feels secure.
